

I. IN THE CLAIMS

Please amend claim 8 to read as follows:

- C
8. A composite laminate interlayer for adhering glass laminates comprising a layer of plasticized polyvinyl butyral adhesive having a glass transition temperature greater than 35 °C, at least one layer of polyethylene terephthalate sheet having a thickness greater than 0.075 millimeters (3 mils), at least one elastomeric layer adapted to reducing sound transmission through the glass laminate, and at least one other layer of plasticized polyvinyl butyral adhesive.
